

100 Series™ Safety First

Common accidents involving windows and doors often produce dangerous shards of glass causing serious injury and costly damage. ACE™ security laminates assist in eliminating these problems by converting ordinary windows into protective safety glass.

It's not enough to protect your home with even the most advanced security system. Unless you reinforce your glass windows and doors, intruders can still enter your home after the alarm sounds.

ACE products complement your safety and security needs. ACE provides top quality security window films that in most cases stop thieves before a break-in occurs.

ACE security films are almost impenetrable for a common smash and grab thief. Under attack, whether it be intentional or accidental, ACE safety films continue to resist penetration. If your window breaks, our film's adhesive grip will hold the majority of broken glass fragments together. The strengthening force of ACE security films discourages thieves and provides clients with peace of mind.

ACE security window films are third-party tested by the internationally renowned laboratory, Intertek Testing Services (ITS). Test reports certify that ACE security

window films meet and exceed safety standards for glass. In fact, the ACE 100 series have a break strength measuring up to 190 pounds per inch.

When you purchase security window films, make the right choice. Reinforce your glass windows and doors with ACE security films. It is a one-time investment that pays off.

ACE security films are recommended for homes, apartments, offices, hospitals, schools and vehicles.

ACE laminates can protect against injury and damage from flying glass caused by extreme weather.

Applications

- Shatter control
- Bomb blast resistance (SF7)
- Added protection during hurricanes, tornadoes and earthquakes

Specifications

Details

- Apply to new or existing glass
- Rejects up to 99% of harmful ultraviolet rays
- Optically clear
- Installation conducted by professional technicians
- Backed by a lifetime warranty
