

Case study #3 – TV station, United States

Faced with a significant rise in threats, this organization looked to harden key glass entranceways into their studios.

The organization explored conventional bullet proof glass and dismissed the technology due to costs, re-construction and re-engineering requirements and down-time.

Using our proprietary technology, ACE retrofit the entranceway to a ballistic level of UL Level 1.

Total cost with ACE: \$60,000

Conventional ballistic glass: Dismissed by client due to costs and complex technical requirements
